

Croatia - DHMZ

- very challenging years – COVID-19, but more caused by Zagreb 2020 earthquakes
 - 5.5 and 5.3 Richter scale
 - irreversibly damaged the Headquarters, fortunately with no casualties
 - remote work - organized because of COVID preparations - introduced
 - provisional Forecasting operational room established
 - Service moved in a building under lease (working conditions now better)
 - project for the new building is underway but delays expected

Croatia - DHMZ

- New HPC, 6 new radars...
- Aladin LAEF (precip type...
- preparations for a more comprehensive warning system (counties)
- Ready for StormNaming
- 'brain drain' - lack of new staff available, interest for meteorology study decreasing – still few FC apprentices accepted recently (physicist!)

more detailed in special talk in the afternoon...
