WGCEF 2023 - Updates from MET Norway

Leonidas Tsopouridis

- GEOWEB: A new meteorological workstation
 - An application used by the forecasters
 - to visualize meteorological data
 - to produce weather forecasts
 - It is under development , presented in workshops/ training courses
 - on display in our forecasting room in Bergen
- New staff (mainly in Bardufoss, Orland)
- KraK (deep convection) group (methodology, tools, database, new criteria)
- Hans: an extreme storm to remember, difficulty between “a lot of rain” and “torrential” rain warnings
